

Certificate Course in Technical Analysis at Birla Institute of Management & Futuristic Studies

Technical Analysis is the method to analyse securities and make investment decisions. It studies the supply and demand in a market in an attempt to determine what direction, or trend, will continue in the future. In other words, technical analysis attempts to understand the emotions in the market by studying the market itself, as opposed to its components. If you understand the benefits and limitations of technical analysis, it can give you a new set of tools or skills that will enable you to be a better trader or investor.

In this course, we introduce students to the subject of technical analysis. Although it is a broad topic, the course content provides with the foundation a student may need to understand more advanced concepts down the road.
